Introducing the SuperPay apps, a new technology in the mobile-payments market. Providing mobile-payments services on any device, SuperPay brings a new level of secured cross-network mobile payment transactions.

As a flexible end-to-end mobile payments solution, the SuperPay suite is a secure and customizable answer for governments, MNO, banks and retailers.

Considering the unbanked population, SuperPay can be used for depositing, withdrawing transferring funds and paying for goods and bills on any mobile device.

Supporting multiple payment methods, SuperPay monetary transactions are processed over a tightly-secured closed / open-loop protective layer employing technologies such as biometric authentication, IVR and NFC.

SuperPay as a modular products suite, enables optimization of existing mobile payments solutions either as a fully integrated system or a standalone product.
SuperWallet

Bringing a new level of security to e-wallet technology, SuperWallet provides secured cross-network payments on any mobile device anywhere.

Standalone, or part of the SuperPay solution, SuperWallet offers a range of secure mobile financial services that are authenticated and exchanged via multiple remote and proximity channels.

SuperWallet services include deposits, withdrawals, money transfers, paying for bills and goods, top up and remittance.

Providing secured person-to-person monetary transactions, SuperWallet also answers many of the unbanked population's needs.

SafeMoney

The absolute and first protective layer, safeguarding payment assets on mobile devices, SafeMoney offers a secured payments transactions channel directly to the payments processor.

Part of the SuperWallet solution or easily integrated as an addition to any mobile wallet, SafeMoney alerts on network security breaches and a device's suspicious behavior.

SafeMoney works on any platform and over any network and can be customized to match all electronic wallet security requirements.

SuperPOS

Enabling merchants to safely sell and accept payments anywhere on any smart device, SuperPOS opens the door for new and increased business opportunities.

A secured cashless cross-network mobile to POS payments endorsement solution, SuperPOS is a better channel for receiving money for services, goods and bills.

Promoting user satisfaction and leading to higher sales, SuperPOS supports and streamlines many business procedures such as improving usability of a products catalog or processing customer information.

As a versatile solution, SuperPOS processes and secures payments using technologies such as NFC using HCE, biometric authentication, one time passwords and the SafeMoney platform.

SuperGateway

The backend of the SuperPay end-to-end solution, the SuperGateway electronic card management processing platform provides quick acceptance of payment methods from e-wallets and money transfer systems via financial institutes to credit cards and micro-payments.

SuperGateway tools are built for obtaining analytical and detailed information at any stage of the payments process, from first level support to top management.

Easily integrated into external services such as anti-fraud, CRM and card management systems, SuperGateway has strong monitoring, reconciliation and discrepancies alerting tools and is available either as a standalone product or as part of the SuperPay suite.

PayGuard

Introducing a new mobile payments concept for simple and secured internet shopping, PayGuard combines one click e-commerce payments technology with multi-level authentication using any mobile device.

Standalone, or an integral part of the SuperPay suite, PayGuard offers the safest payment method for any site on any internet browser.

PayGuard makes shopping simple and keeps buyer information private. Employing latest audio-authentication technology, a request for payment is processed by verification of a buyer-specific sound generated from the buyer's mobile phone.
You don't need an account, you only need a phone. Go Mobile

SuperPay Solutions

- SuperWallet, providing secured financial e-money services on any mobile device
- SuperPOS, for secured audio-authenticated Point of Sales payments
- PayGuard, for effective one click e-commerce payments
