

Mining Information System (MIS)

A more mature and experienced approach to mining titles

A versatile and modular solution, SuperCom Mining Information System (MIS) fully answers the multifaceted challenges of mining management. Bringing new technologies and communication lines, MIS combines advanced GIS capabilities and spatial data management in an integrated system with a centralized database. Offering multiple services, MIS modules include Mine Registration, Site Inspections, Workflow Management, GIS, Reports and a Web Portal for online application requests, general queries and online payments.

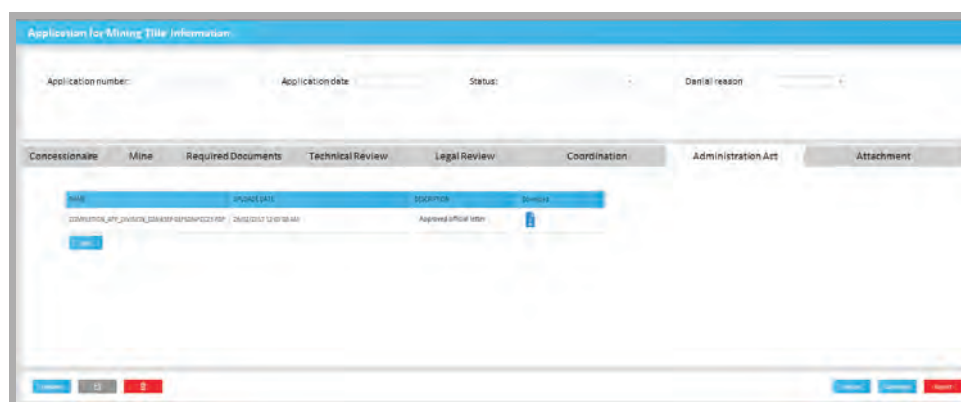

Mining Information System

The experience to know, the technology to advance

Your partners throughout all stages of the project, SuperCom experts introduce tried and tested workflows, methodologies and processes for the mining registration and inspection lifecycle:

- One integrated system providing all management services
- Cyber-secure, accurate, reliable and current information
- Monitored and controlled mining workflows
- Onsite and remote support
- Extensive training on system operation during and after handover
- Tools that improve employee proficiency and efficiency
- Different financing options including PPP / BOT
